About me (real quick)

Trifon Statkov

3+ years of working (happily) at **Strypes** 
an ICT Group company

Web Developer 12+ years

JS Developer 5+ years

Here to explain to you in one  time what Servoy is

Learn more about me in [LinkedIn](#)
(if you feel like it)

So, what is Servoy?

- Yet another development tool
- Can create web apps
- Can create desktop apps
- No mobile app support ... yet :)

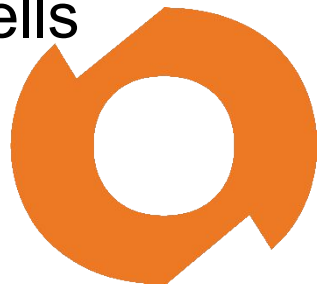

How does Servoy work?

- You write JavaScript
- It uses Rhino to generate a Java .war file from your beautiful code that ideally reads like a poem ;)
- It uses Tomcat internally to bring the server up

Pros

- Is open source
- Allows for more intuitive approach to building UI
- Can accelerate the development of some more straightforward projects
- It's still JavaScript although it gets deployed as Java
- Might not be popular, but is still alive and kicking after 15+ years and has its customers so that probably tells you something

Cons / Downsides

- Not suitable for projects that require more dynamic/conditional rendering of components
- Can be restrictive and downright problematic
- Don't expect big StackOverflow community or huge userbase
- UI components use the Angular 1.x markup
- UI results will not be flashy or wow, but will work

Let's get our hands
DIRTY...
... real quick
... this sounds wrong
